Thorough Examination

Notes and general recommendations:

1. All items that have been temporarily marked must be permanently marked in order that weekly examination records and future thorough examinations can identify the same individual items of equipment.
2. Climbing and rigging equipment must be stored in separate bags to avoid cross use.
3. It is recommended that all discarded items be destroyed rather than simply put into a bin as these items may appear desirable to people subsequently finding them. As the future use of these items cannot be predicted and as a 'duty of care' exists, destruction would be the best option.
4. It would be prudent to ensure that from now onwards, lifting equipment purchased bears both a CE mark and an indication of the minimum breaking strength as specified by the manufacturer.
5. It would also be prudent to include an issue date when adding individual identification to textile item as current industry recommendation is that textile items should be retired after 5 years service or 10 years from the date of manufacture.
6. A LOLER kit should be assembled which would normally include shrink wrap, coloured tapes, a heat gun, a hot cutting knife and an engraving tool in order that new items to the inventory can be individually marked.
7. it is recommended that a system of colour coding be used for ropes, for example:
 - > Green labels would indicate safe to use for personal support
 - > Blue labels would indicate safe for lowering
 - > Red labels would indicate that a rope had been de-rated and now no longer safe to use for anything other than pulling or tying down

Please note that the findings of this report shall only be valid until the individual items of equipment are again used as further wear and tear shall occur. The user must check the equipment prior to use and record and inspection weekly. The equipment should be thoroughly examined on a regular basis – 6 monthly for climbing and 12 monthly for rigging equipment.

This report is not valid without the covering page.
